Project Title: Hare of the Woods, a Cottontail Rabbit Website

I'd like to build this site as multiple pages rather than one long page, with simple navigation across the top that turns into a menu on smaller screens. The Wikipedia article is pretty focused, so I want the pages to work like a small field guide: first what a cottontail is, then where it lives, how it gets through the day, and how it grows up, and then a species guide that brings all 27 species together in one place.

- **Home Page/Introduction** – Introduce cottontails as the genus *Sylvilagus*, a group of 27 rabbit species found across the Americas, and explain where the name comes from (the white underside of the tail that shows when they run). Short intro, a large photo, and links into each page.
- **Meet the Cottontail** – Name and family. What *Sylvilagus* means ("hare of the woods" in Latin), who named the genus (J.E. Gray, 1867), their closest relative (the pygmy rabbit) compared to European rabbits and hares, and their brown to gray fur that changes with the seasons.
- **Where They Live** – Range across North, Central, and northern and central South America, possibly with a map. Their habitat on the edges of fields and farms (and sometimes yards and parks), and how they nest in shallow dips in the ground called forms or in burrows left by other animals.
- **Staying Alive** – Everyday behavior. How they eat on all fours and move food with their noses, why they stay in on windy days (wind makes it hard to hear), their predators (birds of prey are the most common), and their resistance to myxomatosis compared to European rabbits.
- **Growing Up** – Life cycle. About three litters a year with around four babies each, young born helpless and reaching adult size in about three months, females able to breed at around six months, and an average lifespan of about two years.
- **Species Guide** – All 27 species, grouped into the three subgenera (*Microlagus*, *Sylvilagus*, and *Tapeti*). Each species gets a small card with its common name, scientific name, and where it lives, like the eastern cottontail, the swamp rabbit, and the tapetis of South America. A short note at the end about fossil species.
- **Sources** – This page will just list sources, including the Wikipedia page, as well as sources for photography and any other credits that need to be provided.
