Project Title: All About Rabbits

I'd like to build this site as multiple pages rather than one long page, with simple navigation across the top that turns into a menu on smaller screens. The Wikipedia article covers a lot, from biology to history to pop culture, so I want to group it into pages that build on each other: first what a rabbit is, then how its body works, how it lives, where it lives, and finally how rabbits connect to people. Each page would open with one large photo and a short intro, then break into smaller sections with a few key facts pulled out so it's easy to scan.

- **Home Page/Introduction** – Introduce rabbits as small mammals in the family Leporidae and set the tone that there is a lot more to them than being a pet. A few quick facts up front, like more than 70 species across 11 genera, and the European rabbit being the ancestor of every domestic breed. Links into each of the other pages.
- **What Is a Rabbit?** – Classification and naming. Why rabbits aren't rodents (they were moved to their own order, Lagomorpha, in 1912), a side-by-side comparison of rabbits and hares, where rabbits came from (an ancestor about 55 million years ago in what is now Mongolia), and vocabulary like buck, doe, kit, and warren.
- **Built to Survive** – The rabbit's body. Strong hind legs for hopping and kicking, long ears that help them stay cool, almost 360 degree vision, and how they digest a high-fiber diet (including eating cecotropes and not being able to vomit).
- **Rabbit Life** – Behavior and life cycle. Reproduction (a 27 to 30 day pregnancy and litters of 1 to 12 kits), sleep and being active at night, and lifespan (about 1 to 5 years in the wild, with a record of 18 years).
- **Where Rabbits Live** – Habitat and range, possibly with a map. The impact of rabbits that were introduced to Australia and New Zealand, and the diseases that affect them, like myxomatosis and rabbit hemorrhagic disease.
- **Rabbits and People** – Domestication, from ancient Rome to selective breeding in the Middle Ages, rabbits raised for meat, fur, and Angora wool, and rabbits in symbolism and pop culture (the Chinese zodiac, the lucky rabbit's foot, Peter Rabbit, Bugs Bunny, and the White Rabbit).
- **Sources** – This page will just list sources, including the Wikipedia page, as well as sources for photography and any other credits that need to be provided.
